THE RED PILL®   by SohoStar

Our Constitution protects our rights to free speech, privacy, security, defense and protection from an over-reaching government. But, the current cavalier attitude of big-tech and agencies is to violate essentially all of these rights. At first, hidden from view and now in the open, their audacity has exposed their activities. The four big-tech companies - Google, Facebook, Apple and Amazon all have close ties with surveillance agencies and all reach through their products to export personal information, including private conversations, to the Cloud where it is then sent on to third parties.

The big question has been where do we go to get out of this "Matrix"?

The Red Pill® is a personal Internet communication server designed to protect your Constitutional rights for home and business. The server unifies, secures, and simplifies control of your communications, whether social or business networking, reading the news, keeping in touch, or seeing the Matrix as it really is.

The Red Pill® is supported through SohoStar and your trust-network with applications installed in the server for Domain Name Serving, Cyber-Security, Email and Social Media, protected Sharing, DRM Content, and VPN connections. (Provided through SohoStar's Fifth™, WhereIsFido™, TheLibrarian™, TruDns™, CidrPress™, and other software modules.)

Just a few of the benefits:

- Provides the world's first secure social media platform so all your personal information is kept out of other's hands.
- Prohibits censoring of content or information; guarding your first amendment rights.
- Unifies, secures and simplifies control of all your communications whether social or business networking, reading the news or keeping in touch.
- Allows you to group your contacts into trust levels which enables you to control who sees what.
- Allows you to choose to keep everything local – and not in the "Cloud". Supports local storage of all your content
- Allows you to teach "nickname" or "pet-name routing" to your system; which means you don't have to remember your friends email addresses, just their names.
- Protects you from malicious communications
- Blocks hacking attempts
- Communicates with other Red Pills when a threat has been established so everyone is standing guard against it
- Provides authentication of all incoming information and communication so you never have to fear you are getting something other than what you requested.
- Blocks tracking Analytics which reduces or stops advertisements compiled from your previous searches.
- Bypasses data miners by learning where the other pills in your network hive are; because communications travel point-to-point.
- Learns alternate paths to other Red Pills in the event of any outages or blockages.
- Facilitates free examination of news and information in our search for truth
- Provides a platform for publishing content with multiple revenue models.
- Protected by the 4th Amendment of your property
- Protected by the 5th Amendment because it manages your security keys and you can not be compelled to provide the pass phrase
- Enables you to still have a 3rd party email, but reduces the time your content is on their servers.
- Perfect for business, providing secure networking whether to another pill or to commercial servers by VPN.

About us:

SohoStar is a division of Advanced Intelligent Networks Corporation (AINC) founded in 1995. AINC worked with the Department of Commerce developing national ISDN standards. AINC and SohoStar provide hosting, engineering, and global research in network design, telephony, fault-tolerant engineering and operating system design.

SohoStar provides the support services for The Red Pill® and is developing wireless and server technologies for urban and rural networking. The Red Pill® can also act as a mesh network node, utilizing our US patent for optimal routing on limited and sporadic connections.

Future development and product extension is in the area of IOT interfaces, Smart Sensors, and other areas of home automation without sharing information with 3rd party servers.

The Red Pill® utilizes DAVID™ a proprietary Object Oriented Operating System which enables AI re-active responses to hardware and networking events.

The Red Pill® has been engineered by AINC in the US. It is manufactured in the US by the SohoWave Corporation. Some components are imported (simply not made in the US).

Due to the extensive encryption abilities, this product is not available for sales or export out of the United States.

For additional press or business information please contact us at prcomm@sohostar.us

THE RED PILL® by SohoStar

The Red Pill® has a number of features

SOFTWARE:

FIFTH™: (built in)
- Unified Messaging (text, voice and video) email in one place. Includes per call forwarding and handling.
- Social Media – posts, news, comments, collaboration like FB with multiple levels of trust, individual or group
- Protected content and picture sharing (anti-piracy)
- Control panel for all services
- Guest mode through other Red Pills.
- Web page capture

WhereIsFido™: (built in)
- Finds Red Pills when dynamic address changes
- Supports nick-name routing
- Content discovery within Trust Network

CidrPress™: (built in & includes free SohoStar service)
- Threat scoring of IP addresses
- Incident reporting of hack attempts
- Provides: Network ID, Country, Language and prior threat history.
- Overrides for blocked networks, countries, etc

TruDns™: (built in & includes free SohoStar service)
- Domain Name Services
- Threat scores
- Domain redirection override
- Blocking and redirect to self for specific domains (improper sites, ad blocking, or Analytics trackers)
- Nickname (petname) routing
- Sub-domain lookup for hosting (you@your.pill.zone)
- Supports entire Local Area Network with DNS

TheLibrarian™: (built in)
- Access Control Lists
- Content Discovery for protected content
- Manages Pill-to-Pill transfers
- Total control over encrypted protected sharing
- Email and Communication media routing
- 3rd Party (Gmail, yahoo, etc) email download

SOFTWARE continued:

Digital Rights Management (built in)
- Content discovery
- Key escrow and management
- SohoStar Publishing (extra fee)
- Integrated with Digital wallet
- Anti-censorship
- Anti-piracy

Media Streamer: (built in)
- Universal Plug and Play (UpnP) devices
- Supports network decryption and streaming
- DLNA certification expected 2Q'19
- Can support personal library on a Local Area Network device or USB disk or thumbdrive

HARDWARE:

- Multi-source power (USB or 12-36VDC adapter)
- Supports external USB device (Thumbdrive, Disk)
- 2 processors, each with separate memory, Encryption Support Engines, Flash Storage
- 2 Ethernet ports, 2 USBs, including hub support
- Internal Battery backup, supports continuity, graceful shutdown if extended power failure
- Wifi Interface port (after market wifi module)

120v adapter and data cable provided with setup guide.
One year warranty, free software updates
NOT FOR EXPORT

FUTURE: (Currently in design)
- Integrated Pill with DSL and Cable Modem
- 34 Mbit radio modem for rural networking
- Trust network Token
- Short Range VoIP Phone
- Optical Networking Hub
- HDMI extender and video rendering engine
